BACKGROUND

" PatientPing has opened our eyes to the PAC world. We can now see the trends of where our patients are going and ensure process improvement, intervene on care events, and receive more insights on our patients."

- Janice Finder, Director of Population Health, Houston Methodist Coordinated Care

Houston Methodist Coordinated Care (HMCC), located in Houston, Texas, is an Accountable Care Organization (ACO) led by physicians affiliated with Houston Methodist and the community. Houston Methodist's network consists of 7 full service hospitals, 98 employed physicians, and 30 independent physicians located throughout the state. HMCC ensures that its participating providers are supported with the tools and resources they need to improve care quality and safety for the patients they serve.

Houston Methodist began using PatientPing in July of 2017, marking PatientPing's entry into Texas. The two organizations hold a unique partnership and work together to improve statewide care coordination.

BARRIERS TO SUCCESS

Houston Methodist joined Track 3 of the Medicare Shared Savings Program (MSSP) in January of 2017. At the time, HMCC had little insight into patients' post-acute care (PAC) activity. They relied on quarterly CMS data and phone calls to skilled nursing facilities (SNFs) to locate patients. Given that the data was lagged and the fact that it often took multiple tries to get ahold of SNFs, HMCC typically only found out about patient events 10 to 15 days after they occurred.

Knowing that they were an outlier in the PAC space, HMCC was in need of a solution that would help them monitor patient events in real time to improve their care coordination efforts and succeed under MSSP.

DIRECT RESULTS

Since implementing PatientPing, Houston Methodist Coordinated Care has:

- Reduced length of stay (LOS) for its managed patients from **25 days to 21 days**, resulting in **\$681,000 in savings**
- Earned **\$1,258,180 in shared savings** under CMS' Medicare Shared Savings Program in 2017. By gaining visibility into post-acute events and being able to intervene in real time with PatientPing, HMCC achieved shared savings for the first time in 2017.
- Doubled the number of patients receiving care in their post-acute network
- Refined and expanded its preferred PAC network

"PatientPing is a much-needed platform for our relationship with HMCC, and allows us to follow patients' movements in real time. The easy-to-use product provides our corporate team with the ability to monitor and hold our care teams and post-acute partners accountable for quality patient outcomes. We set notifications to alert our teams when an ACO patient admits to one of our facilities—the communication and data accompanied with patients' profiles helps with transitioning patients from acute settings and serves as an effective tool for our interdisciplinary teams. Without PatientPing, the trajectory of patients and cross-functional communication between acute and post-acute would be almost impossible."

- Ron McGaughy, Vice President of Network Development at HMG Healthcare, LLC.

WHAT DROVE RESULTS?

IMPLEMENTATION & WORKFLOWS

HMCC began contracting with PatientPing in May of 2017, and was live with the platform just two months later. PatientPing was implemented at over 190 sites of care, including provider organizations, hospitals, SNFs and LTACs.

To begin the onboarding process, PatientPing provided participating organizations with in-person demos of the platform and equipped them with best practice toolkits with tips on how to best integrate PatientPing into their daily workflows.

HMCC's project specialist logs into PatientPing at the start of each day to view a customized report on all patients who have been admitted to or discharged from a PAC or ED setting. The project specialist then assigns all events to the appropriate care team member. HMCC's partner, Evolent Health, manages five post-acute care facilities and all LTAC admissions and discharges. HMCC's medical director is responsible for all other care events.

In addition to monitoring the PatientPing web application throughout the day, HMCC's project specialist also utilizes PatientPing's text and email notifications to receive push alerts on patient events.

When a new event occurs, the HMCC team reviews the patient's visit history and care team information to determine next steps for outreach. HMCC then either calls the facility where patients are located, or contacts a member of their care team to ensure that the appropriate services are provided. This also offers HMCC an opportunity to update the patient's information, as well as to relay critical patient information to the rest of the care team.

WHAT DROVE RESULTS

IMPLEMENTATION & WORKFLOWS

HMCC uses PatientPing's saved filters to access events for specific subsets of patients. Some of these filters include the 'SNF Admit Filter' to see patients who have been admitted to a SNF, and the 'LTAC Discharges Filter' to see those patients who have been discharged from a long-term care facility.

Additionally, HMCC provides PatientPing with a roster of their patients belonging to bundled payment programs so that they can more efficiently monitor those patients across their entire episode of care.

The HMCC team meets weekly to review all admissions and discharges from the previous week to ensure that follow ups have been made and that patients are receiving care in the appropriate care setting.

PATIENT SUCCESS STORY

In the fall of 2017, HMCC received a Ping on a patient who was admitted to a SNF in Connecticut. The team quickly reached out to the patient's family to follow up and discovered that she had fallen while visiting a friend. The patient had received inpatient care while in CT and was then discharged to a SNF to receive care for her injury. The HMCC team was able to connect the family with a PCP in Connecticut to ensure that the patient was receiving the care she needed. HMCC then relayed this information back to the patient's PCP in Texas, who was unaware of the patient's care event.

Without PatientPing, both HMCC and the patient's PCP would have been unaware of the patient's care event and her whereabouts. Additionally, HMCC would not have been able to facilitate a follow up with the patient or connect her with the services she needed while out of state.

PARTNERSHIP TODAY

Today, HMCC and PatientPing hold monthly check-in meetings to review new platform features, and to discuss ways in which the partnership can be strengthened.

Currently, 100 percent of Houston Methodist's post-acute partners are using the PatientPing platform. With increased visibility into SNF performance through PatientPing, Houston Methodist has since added 10 SNFs to their preferred network, and it is now required by HMCC that all preferred SNFs use PatientPing. PatientPing and HMCC work together to grow the PatientPing community in Texas, which now consists of over 350 post-acute facilities, hospitals, and provider organizations throughout the state. The two organizations are in close communication on ways they can improve care coordination and engagement throughout the state.

In October of 2018, PatientPing hosted a Texas Community Summit, which brought together over 50 of PatientPing's ACO, skilled nursing facility (SNF), home health agency (HHA), long-term acute care (LTAC) and hospice community members from across the state to discuss how they coordinate care for their patients as well best practices for using the PatientPing tool. PatientPing and HMCC continue these partnership efforts to ensure an engaged community of providers for Houston and the state of Texas at large.
